- + [Arm Functional Safety Partnership Program](#)

The Arm Functional Safety Partnership Program brings together partners in the vast Arm ecosystem with a special focus on functional safety related services and products.

With our ecosystem of thousands of partners, it is sometimes difficult for customers to find the ones that have the right experience in the field of functional safety. This program will make that quest easier and the time to market shorter.

Our Software and Tools category is for partners providing safety related software products, such as operating systems, libraries or hypervisors, or offline software tools such as compilers, models or verification tools. Partners wishing to join this category should have a software product, or tools to enable a functional safety solution on Arm IP.

If you would like to join the program in our Software and Tools category, register your interest [here](#). As a pre-requisite of joining the program, evidence to showcase compliance to the below quality standards must be provided during the registration process.

Quality Standards

We have defined a set of Quality Standards in Schedule 1 of the Arm Functional Safety Partner Software and Tools agreement ("Agreement") that our partners need to prove to be part of this program.

The Quality Standards set by Arm include but are not limited to the following requirements:

Requirements	Comments (Please explain how your organization meets these requirements, also share evidence (certificates/links) as applicable)
Partner has a product which is compatible/ works with one of the Arm Safety Ready products	<Please share assessment certificates and links to prove that your product(s) are compatible with Arm safety ready products>
Partner has had a product certified for a customer within the last 12 months	<E.g. Assessment certificate, endorsement/testimonial from customers, links to customer website using your product providing evidence of certification>

Partner has received official certification across any of the industry safety standards	<E.g. Endorsement/testimonial from customers, links to certificates in customer website using your product to ASPICE, IEC 61508, ISO 26262 or other relevant safety standards>
Partner is financially stable	<3 years of audited financial statements or a statement or other evidence to confirm your financial stability>
Partner has a certified ISO 9001 or equivalent quality assurance process	<Provide ISO 9001 or equivalent quality management system certification evidence>
Partner demonstrates high levels of information security and management	<Provide evidence of information security certification if available or examples of information security processes in place>
Partner has business continuity processes in place	<Provide evidence of business continuity process, records of annual drills etc>

If you have any queries about the quality standards or Software & Tools category, please contact safety.partners@arm.com
